Complex Responsive Processes in Organizations In Large-Scale Scrum, Craig Larman and Bas Vodde offer the most direct, concise, actionable guide to mapping the full benefits of agile in distributed, global enterprises. Larman and Vodde have distilled their immense experience helping geographically distributed development organizations move agile. Going beyond their previous books, they offer today's fastest, most focused guidance: "Brave New Work" and "Principles of Management". This monograph focuses on the level of management culture development in organizations attempting to disclose it not only with the help of (1) catalysts—events that directly facilitate project work, such as clear goals and autonomy—and (2) nourishers—interpersonal events that uplift workers, including coaching and team building, but also with the need to move from linear models of thought to problemsolving with synthetic and simultaneous thinking.

Brave New Work The past decade has seen increasing focus on the importance of information and knowledge in economic and social processes, so-called "knowledge economy". This is reflected in the popularity amongst practicing managers and organizational theorists of notions of learning, sense-making, knowledge creation, knowledge management, knowledge culture and more recently, of emotional intelligence as an important management skill.

Principles of Management This monograph focuses on the level of management culture development in organizations attempting to disclose it not only with the help of (1) catalysts—events that directly facilitate project work, such as clear goals and autonomy—and (2) nourishers—interpersonal events that uplift workers, including coaching and team building, but also with the need to move from linear models of thought to problemsolving with synthetic and simultaneous thinking. This book should help to provide some starting points and ideas to deal with the new era. It should not be understood as the end of the road, but as the beginning of a journey exploring and developing new concepts for a new way of management.
